REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The following is a statement of reasons for the indication of allowable subject matter:

The claimed subject matter in claims 1-34 is allowable because the arts of record fail to teach or fairly suggest the claimed: "a method for use in a system that is adapted to transmit a data burst over at least two antennas, the method comprising the step of: transmitting at least two training sequences, each of the at least two training sequences being transmitted over a different respective antenna, each of the at least two training sequences having a ***normalized auto-correlation below an auto-correlation threshold, the auto-correlation threshold being significantly less than unity, and each pair of the at least two training sequences having a normalized cross-correlation below a cross-correlation threshold, the cross-correlation threshold being significantly less than unity*** as in claims 1 and 26;

a method for use in a system that is adapted to transmit a data burst over at least two antennas, the method comprising the step of:

transmitting at least two training sequences, each of the at least two training sequences being transmitted over a different respective antenna, the training sequences being shifted versions of each other, ***with each cyclic sequences having a normalized cyclic-auto-correlation below a cyclic-auto-correlation threshold, each cyclic sequence being N' , $N'=N-L+1$, symbols of one of the at least two training sequences, the cyclic-auto-correlation threshold being significantly less than unity***, L being the number of symbols over which multipaths of significant power can

arrive, and N being the number of symbols in one of the training Sequences as in claim 12; and

a method for use in a system that is adapted to transmit a data burst over at least two antennas, the method comprising the step of:

transmitting at least two training sequences, each of the at least two training sequences being transmitted over a different respective antenna, ***a trace of an inverse of a product of a matrix of symbols of the at least two training sequences and a conjugate transpose of the matrix is below a trace threshold, the trace threshold being below $SML/IN-L+1$, L being the number of symbols over which multipaths of significant power can arrive, M being the number of training sequences, and N being the number of symbols in one of the training sequences as in claim 19.***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
